

ACCESS SYSTEMS DESIGN CONSULTANCY

Outline

High Q offers specialist consultancy services to Clients who are required to design and provide a safe workplace through the selection and installation of height safety and access systems.

The processes of design, selection and installation of work at height safety systems are both onerous and industry specific. High Q can assist Clients to make informed and commercially astute decisions by implementing the following protocols:

- To determine and advise of the Client's legislative obligations in respect of building design relevant to access obligations and workplace safety;
- To determine and achieve goals with the Client in creating a balance of cost, function and aesthetics;
- To advise on the impact of building design relevant to access requirements;
- To assist in identifying suitable access systems that meet with the objectives of the building design, budget, maintenance and access requirements;
- Together with the client, draft the subcontract tender package with content commensurate with work at height requirements;
- Develop drawings to accompany the subcontractor package that visually articulate the Client's specifications for tender;
- Provide technical assessment protocols that assist the Client to make an informed decision on the tender applications;
- Oversee the roll out of the installation contract through implementation of proven, work at height safety and access systems quality assurance measures.

High Q will help Clients to achieve their goals across all aspects of project management.

For more information or to arrange for one of our consultants to come to your workplace to discuss your project, please call our Brisbane office on 07) 3255 0522 or email info@high-q.com.au.

High Q – the height of service
